

# SHIVAM PANDIYA

Senior Product Owner | GenAI, AI, FinTech & Web3 Products

shivampan98@gmail.com | +91-8302312470 | [linkedin.com/in/shivam-sot](https://www.linkedin.com/in/shivam-sot) | [shivampandiya.com](https://shivampandiya.com)

## SUMMARY

---

Product owner with 6+ years spent finding the real problem behind what users ask for, then building the product that solves it, across GenAI, tokenisation, and Web3 infrastructure. Shipped a GenAI clinical assistant with defined guardrails and human review boundaries, and built AI agents now used across product teams that cut research from three days to one hour. Set product direction for a tokenisation platform covering gold, bonds, and equities across India, UAE, and US markets. Took a cloud infrastructure platform from zero to 82 enterprise clients at 600-700M API requests a day and 99.95% uptime, and introduced the premium tiers generating more than \$250K in quarterly recurring revenue.

## CORE COMPETENCIES

---

Product Vision & Roadmap | Backlog Ownership | User Stories & Acceptance Criteria | Release Planning  
GenAI Products | LLM Evaluation | Guardrails & Human-in-the-Loop | AI Agents & Workflow Automation  
FinTech & Web3 | Payments | Stablecoin Rails | Tokenisation | DeFi Lending | Digital Exchanges  
Requirements & Process Mapping | Stakeholder Management | Agile & Scrum | UAT | Cross-Functional Delivery

## PROFESSIONAL EXPERIENCE

---

### Senior Product Owner

[Antier Solutions](#)

Jun 2021 - Present

Chandigarh, India

- Own product backlogs and roadmaps across three concurrent products, prioritising by business value, customer impact, and engineering capacity.
- Translate ambiguous business problems into requirements, user stories, acceptance criteria, and process flows, and stay with engineering from discovery through release.
- Owned the backlog for Instanodes, a cloud infrastructure platform serving 82 enterprise clients at 600-700M API requests per day and 99.95% uptime across 50+ networks.
- Introduced Dedicated Clusters and One-Click Private Blockchain Deployment, setting the pricing and packaging behind more than \$250K in quarterly recurring revenue.
- Chose reliability and monitoring over feature breadth after customer research showed prospects were deciding on uptime rather than the features they had requested. Conversion improved.
- Set the boundaries for AI features after evaluating GPT, Claude, Grok, Llama, and Amazon Bedrock on quality, safety, and cost, defining what a model answers directly and where a person reviews.
- Built AI agents in n8n and Notion covering 350+ client deliverables, cutting research from three days to one hour and documentation from days to hours.
- Set product direction for an enterprise tokenisation platform for real-world assets, spanning India, UAE, and US markets.
- Delivered payment products including payment gateway and Stripe integrations, invoicing flows, and crypto payment solutions.
- Integrated Circle's Cross-Chain Transfer Protocol (CCTP) into a blockchain solution to support native USDC transfer across chains.
- Make the API design calls on resources, endpoints, schemas, and error handling, and maintain the Swagger documentation and Postman collections clients integrate against.
- Run UAT with QA teams on test scenarios and edge cases and sign off production releases, working alongside 12 product managers and owners, 80+ engineers, and 25+ client engagements valued at up to \$1.5M.

### Product Owner

[SireChain \(Antier Affiliate\)](#)

Oct 2022 - Mar 2025

Remote

- Owned backlog prioritisation, sprint execution, and release planning for a Layer 1 platform spanning wallets, staking, governance, and validator infrastructure.
- Wrote functional requirements, user stories, and acceptance criteria, and adapted the roadmap as launch priorities shifted.

- Defined tokenomics, staking models, validator incentives, and governance frameworks ahead of the mainnet launch.
- Sequenced releases against external readiness rather than dates, shipping as security audits, exchange integrations, and legal sign-off each cleared.
- Supported a launch recording 10M+ on-chain transactions across validator operations, ecosystem partners, developer testing, and launch campaigns.
- Authored whitepapers, technical reports, and release communications for developer, partner, and institutional audiences.

## Research Analyst

Sanghvi Consultancy

Oct 2020 - Mar 2021

Ahmedabad, Gujarat

- Ran market research, competitive analysis, and business process studies across insurance and financial services.
- Automated operational reporting workflows using Excel-based systems, replacing manual reporting cycles.

## PROJECTS

---

### [Blockmaze](#) | Enterprise RWA Tokenisation Platform

- Designed issuer and investor onboarding journeys, KYC and KYB verification, and governance controls for tokenised gold, bonds, and equities.
- Translated regulatory requirements across three jurisdictions into product workflows and exception handling.

### [Instanodes](#) | Cloud Infrastructure Platform

- Defined the service architecture across RPC endpoints, Node-as-a-Service, Validator-as-a-Service, and dedicated infrastructure, covering permissionless and permissioned networks.
- Defined reusable service components rather than per-client builds, keeping recurring needs in the product and one-off needs in configuration.

### Vuelo | GenAI Healthcare Mobile Application

- Defined what the model could answer directly, where a clinician stayed in the loop, and how the system behaved when confidence was low.
- Cut the first release to two capabilities rather than the full planned AI scope, reaching users earlier and letting their feedback shape the next increment.

## TECHNICAL SKILLS

---

**Product Ownership:** Product Vision, Roadmap, Backlog Ownership, Grooming & Refinement, User Stories, Acceptance Criteria, Release Planning, Prioritisation, Agile, Scrum, UAT

**GenAI & AI:** LLM Evaluation on Quality, Safety and Cost, Guardrails, Human-in-the-Loop Design, Fallback & Escalation Logic, AI Agents, n8n, Notion AI, Claude Code, Codex, Prompt Engineering

**FinTech & Web3:** Payment Gateways, Invoicing, Stripe, Crypto Payments, Cross-Chain Stablecoin Transfer, DeFi Lending, Stablecoin Deposits, RWA Tokenisation, DEX & Swap Flows, Wallets, Spot & Futures Trading, KYC & KYB

**Requirements & Platform:** Requirements Elicitation, Discovery Workshops, Process & Data Flow Mapping, Business Rules & Exception Handling, API Design, REST APIs, JSON-RPC, Swagger & OpenAPI, Postman

**Data & Tools:** SQL for product analysis, GA4 funnel analysis, Dune Analytics, Product Metrics, Jira, Confluence, Figma, Miro, Excel

## CERTIFICATIONS

---

- Product Management with Generative & Agentic AI, BITS Pilani
- Certified Business Analysis Professional (CCBA), IIBA
- NISM Equity Derivatives Certification
- Blockchain Development & Product Planning

## EDUCATION

---

### MBA, Business Analytics

Narsee Monjee Institute of Management Studies (NMIMS)

2026 - 2028

### Bachelor of Commerce (Honours), Entrepreneurship

Vivekananda Global University

2017 - 2020
